

Experience simple, affordable flow cytometry. Muse[®] Cell Analyzer

Simple, affordable flow cytometry. Now at your side.

Sophisticated cell analysis doesn't have to be exclusive, complicated, or costly. With the Muse® Cell Analyzer, you can now achieve highly quantitative results at a fraction of the price, effort, and time. The Muse® Cell Analyzer packs 3-parameter analysis into a compact, easy-to-use benchtop device, making flow cytometry accessible to anyone, any time. A user-friendly touchscreen interface, intuitive software and optimized "Mix-and-Read" assays work to simplify your research.

- Highly quantitative data at the single cell level
- Simple, effortless operation
- Intuitive software and touchscreen user interface
- Rapid setup and analysis
- Optimized Muse® assays
- Compact size; (footprint of only 8 in x 10 in (20 cm x 25 cm)
- Surprisingly affordable!

Highly intuitive touchscreen interface

The Muse® instrument features a highly intuitive touchscreen interface that allows simple step-by-step operation, so easy that no flow expertise is required to run assays. The touchscreen prompts you through simple on-screen instructions and guides you through sample loading to simple setting adjustments to results—in just a few steps!

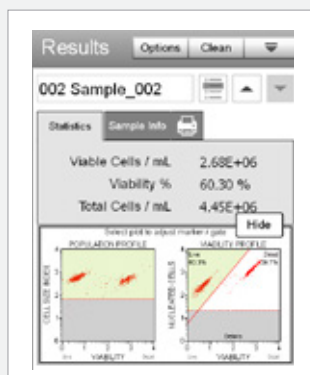

Cell Analysis is effortless and fast

For the assays you rely on most, we've developed optimized kits, validated for robust performance on the Muse® Cell Analyzer. Typical cell preparation protocols have been condensed and simplified, so sample preparation is fast and easy. You don't need to optimize any software settings – the Muse® instrument calculates all gating parameters and thresholds for you. Results are displayed in both graphical and statistical formats specific to each application, making analysis unambiguous. Spend less time with experimental setup, avoid reagent waste and save money – we've done all the work for you.

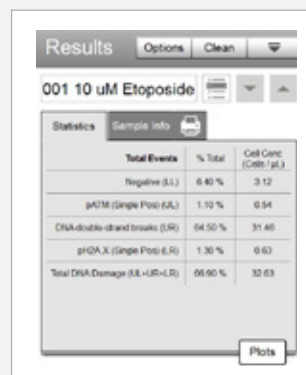

Muse® Assays

Choose from a broad range of Muse® Assays for interrogating multiple aspects of cell biology:

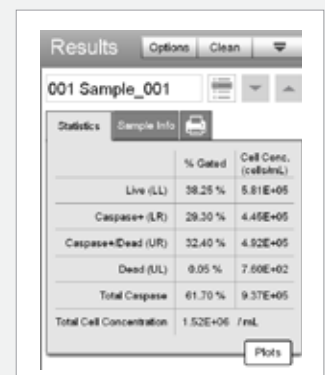

- Count & viability
- Cell proliferation
- Apoptosis
- Cell signaling
- Cell cycle
- DNA damage
- Autophagy
- Immunology

Muse® Cell Count and Viability Kit
Absolute total cell counts and viability of dead and dying cells based on differential permeability of two DNA-binding dyes.

Muse® Multi-Color DNA Damage Kit
Multiplex analysis of phosphorylated ATM and Histone H2A.X to detect extent of cellular DNA damage.

Muse® MultiCaspase Kit
Apoptosis monitoring using a single reagent detecting multiple caspase activity and a dead cell dye

Novel, miniaturized cytometry

The Muse® Cell Analyzer uses patent-pending, miniaturized fluorescent detection and microcapillary technology to deliver truly accurate, precise and quantitative cell analysis compared to other methods. Versatile enough to analyze both suspension and adherent cells 2-60 µm in diameter, the Muse® Cell Analyzer provides greater accuracy and precision than other analysis methods.

Laser-based Fluorescence Detection

The Muse® system delivers high-performance cell analysis using a microcapillary and miniaturized optics, which occupy one-tenth the space of a typical flow cytometer. Laser-based fluorescence detection of each cell event can evaluate up to 3 cellular parameters.

Measure more accurately and reliably

The Muse® Cell Analyzer counts cells more accurately than manual hemocytometry or image-based automated analysis. Multiple adherent and suspension cell types (MCF-7, K562, Hb, CHO-K1, and Jurkat cells) were counted using the methods shown. Cell counts from all three methods were averaged to obtain "theoretical cell concentration". Each point represents average of 3 replicates, and each data series was fit with linear regression. Muse® cell analysis data were correlated with theoretical concentration with slope closest to 1, indicating superior accuracy.
